

# Care and Maintenance

## MP SPORT PRODUCTS

Cleaning and maintenance are required for a long-lasting life of your synthetic sports flooring. Champion Flooring sells a floor cleaner that is produced to work on this type of floor without damage.

**New floors:** Before using your new sports floor mop the cleaning solution over the entire floor with a mop and allow to air dry. Use 4 ounces of cleaner per gallon of water. This provides a barrier on the floor to help scuff marks off the floor.

**Daily cleaning:** The floor should be gone over at least once per day used with a standard dust mop. Do not use any treatments on the mop head. Although it may seem easier to use a treatment you are leaving a buildup on the floor which can make it harder to clean in the long run.

**Scrubbing the floor:** Scrubbing the floor is best done with a Floor maintainer or auto-scrubber. The recommended cleaning is at least once a week using a red pad with the Champion Flooring Synthetic Sports Floor Cleaner. Do not use anything other than a neutral, non-abrasive cleaner or a mild citrus cleaner on the floor or permanent damage may result. The floor will become easier to clean the more you clean it with an auto-scrubber. Once or twice a year mop hot soapy water over the floor and allow it to set for 15 min, this will allow time for the cleaner to breakdown any buildup. Once the cleaner has set on the floor proceed as normal with scrubbing. Rinsing the floor with cold water will help remove any soap residue.

## Beware of:

Make sure all tables and chairs have end caps on the legs.

Make sure all rollers on retractable bleachers are in proper working order.

Do not use any cleaners other than a non-abrasive, neutral or citrus type.

Do not drag any heavy or sharp objects across the floor.

Ink pens, oil, soda pop and other substances may leave a stain especially if not cleaned immediately.

Soft soled shoes will leave scuff marks that may be hard to remove, try to spot clean with a stronger cleaning.
